

## **Sidewalk Improvement Plan for the Village of Trumansburg**

For public comment, January 26, 2013

1. The Village has over \$80,000 available to fund of materials cost (concrete, gravel, drainage) for new or replacement of sidewalks. Areas with slate sidewalks will require additional work and cost.
2. The Village DPW will assist on all sidewalk projects by doing the major site preparation for no more than 2,000 feet of sidewalk each year.
3. Volunteers will provide all the labor for the sidewalk installation and funding of materials for more the amount committed by the Village.
4. Sidewalk projects will be done in the priority order determine by the Village Board of Trustees, however, projects will be given higher priority if there are very active volunteer groups involved.

The following are the list of sidewalk projects to be considered for the next five years.

1. **Lake Street:** Sidewalks should be developed on the north side of Lake St. to the crosswalk on Route 96 to the schools.
2. **South Street:** Construction of a sidewalk should be considered on one side of the street between Whig Street and Tamarack Lane.
3. **Whig Street:** Constructing a 5' concrete sidewalk, at least on the southwest side of the street, and preferably on both sides. The block between the schools and South Street is the highest priority, with the next block to Elm Street being of lesser, but still high importance.
4. **Northwest Sidewalk Extensions:** Extending the sidewalk from Hector Street and the Village Park along Route 96 to Seneca Road in the west shoulder of Route 96 would allow for sidewalk development on Seneca Road to the mobile home park further to the west on Seneca Road. Also, sidewalk improvements currently end at Washington Street and, in the future, should be extended at least to the small Village park at the Hector Street intersection. These extensions will allow sidewalk access to the Fire Station and eventually to Seneca Road to provide access to professional offices and facilities on Seneca Road, east of Route 96.

- 5. Southeast Sidewalk Extensions:** extending the sidewalk network on from the fairgrounds to the Kinney Drug Store and/or Shur Save (and possibly Subway Restaurant) would more safely accommodate pedestrians to these facilities and also provide safe access from remote parking areas to the fairgrounds for large events. This project will only be done if the Town of Ulysses commits to finding a major portion of the material costs and agree to plow this section of sidewalk in the winter.

For more detailed information on each site please refer to the 2007 Tompkins County Walkability Study for Trumansburg on the Village website (<http://www.trumansburg-ny.gov/docs/walkability.pdf> ).
